

SMRITI | AI HEALTH MEMORY

Say it once. Find it when it matters.

Smriti turns family health notes, voice, prescriptions, and reports into a trusted memory you can ask later by person and date.

Preview before save

Person-wise memory

Local or cloud

Papa | vital

BP was 150 over 95 on July 11.

Grandad | visit

Doctor follow-up next Monday.

Ask later

What was Papa's BP?

PROBLEM

Family health memory is broken.

Scattered

Health details live in WhatsApp chats, photos, PDFs, paper prescriptions, and memory.

Stressful

At doctor visits, families forget exact dates, medicines, symptoms, and reports.

Risky

Generic notes apps cannot separate Papa, Mummy, Grandad, and Myself reliably.

The real pain is not storing health data. It is remembering the right fact at the right moment.

SOLUTION

One trusted memory for every person you care for.

- Speak or type a health note in natural language.
- Upload a prescription, report PDF, or photo.
- Smriti extracts editable memory cards.
- User confirms what gets saved. Nothing auto-saves.
- Ask later with source-backed answers.

Three taps: capture, check, remember.

1

Add person

Papa, Mummy,
Grandad, Wife,
Myself, or anyone.

2

Speak/upload

Voice note, typed
note, PDF, or
prescription photo.

3

Preview

AI creates cards:
symptom, medicine,
visit, lab, vital.

4

Confirm

Edit mistakes,
uncheck wrong cards,
then save selected.

5

Ask later

Metformin dose kya
tha? When was BP
high?

Built for household reality, not perfect hospital data.

Person-scoped memory

Each memory stores subject id and subject name, so family members stay separated.

Source-backed answers

Users see which saved memory was used and why the answer was trusted.

Trust-first ingestion

Preview-first flow prevents bad OCR or bad AI extraction from silently polluting memory.

Local and cloud

Use Supermemory Local for private testing or Supermemory Cloud for hosted convenience.

AI memory stack, designed for trust.

Input AI

OpenAI STT for speech-to-text and OpenAI Vision for prescription/report understanding.

Reasoning AI

Groq LLM for structuring notes, rewriting queries, answering, and visit summaries.

Memory layer

Supermemory stores and retrieves memories with metadata, subject id, dates, and source context.

FastAPI
